

Optimize generic clinical trial referrals with MD Prescreen

MD Prescreen is a concierge service powered by research trained and medical experts designed to optimize lead generation into highly qualified referrals that can be customized to meet the sponsor's and trial's needs.

Improve the patient experience

Engagement through patient-preferred outreach via phone, text, and/or email.

Trusted relationships and partners

Facilitated and permissioned chart review so patients are informed about the study.

More diverse participant base

Culturally competent research nurses engage with patients to inform and educate.

Reduce site burden, and increase site efficiency

Rapid outreach—initial patient contact done within 2 business days.

Reduce screen-fail costs

Participant screening is done by nurses or experienced research staff who are the single point of contact.

Continuity of care

Warm handoff for the last mile of the patient journey when pairing with a site.

Let's transform research together.

Empower sites with qualified participant referrals, engaged patients, and a streamlined process for patient recruitment.

Phase I & II Type 1 Diabetes Case Study:

A phase 1/2 three-part study to evaluate an investigational product's safety, tolerability, and efficacy in patients with type 1 diabetes mellitus. Our MD Prescreen services enabled pairing the first two patients to sites across the study and 50% of the total patients in Part B.

Multi-Phase Acute Pain Management Case Study:

A multi-phase and multi-indication portfolio of three acute pain management studies for a single compound. All were randomized and double-blind with the latter two placebo controlled. Our team prescreened the high volume of applicants, resulting in expedited enrollment and early study closure.
